

202

10 June 2014

When visiting in Israel last month,
I met Dr. Karen Freedman *ine.* She explained the
goals and methodology of the Rimon organization
she founded to offer mental health services to
women receiving Assisted Reproductive Technology
treatments. The focus of those providing
the necessary medical care - obstetrics, gynecology,
endocrinology often neglects the need for
supportive mental health care of the patient.
The Rimon organizational focus is to fill
this gap in patient care.

I extend to her my best wishes for
her success in this endeavor - a
'cheese' to be commended.
